Redosier Dogwood 'Baileyi'
(Cornus sericea)

6-10' x 6-10'.
Loose, spreading, rounded, multistemmed.
'Baileyi'lacks the stoloniferous spreading habit of species.

CT native, found in swamps and by streams.
Spreads by underground stems.

Slender upright bright red stems, highly ornamental in winter, especially with snow. Newest growth is brightest red. (Prune out older stems for best color.)

White flowers; showy white fruit.

Good red-purple fall color

Sun to part sun, tolerant of wet areas.
Fast-growing and very adaptable.

Useful for massing, borders, bank-cover, wet areas, winter interest.

Erosion control.

Streamside buffers.

Attracts long & short-tongued bees.

Attracts 100+ species of butterflies and moths. Host to Spring Azure.

Berries are important food source for wood ducks, songbirds, and upland game birds.
