

Concolor Fir **(Abies concolor)**

Evergreen tree, 50' to 75' tall by 20' to 30' wide,
slow to medium growth rate.
Pyramidal, dense, formal shape.

Native to American West

Needles green with blue cast
arranged horizontally on the stem, curving up and out.

Cylindrical cones 4" to 5" long, green then brown.

Whitish-gray smooth bark, except for occasional
resin blisters.
New stems yellow-green.

Sun, prefers deep, moist, well-drained soil, but
less fussy about soil moisture than other firs.
Tolerant of most climates and city conditions.
Easily transplanted, more adaptable than other firs.

Specimen tree with exceptional foliage.
